Development Economics

The course treats the main topics of Development Economics with a focus on empirical research. The course is mainly based on the textbook

Gérard Roland (2014): *Development Economics*, Boston: Pearson

which covers most topics in an accessible and insightful way. The disadvantage of the book is, however, that it is rather expensive. We will, therefore, provide 5 copies of the book in the library. Bugeno has also ordered a number of copies in case you want to buy the book.

Three topics will be supplemented with **additional texts** that are also mandatory reading for the course. This supplemental material are two chapters from the book “Poor Economics” by Abhijit Banerjee and Esther Duflo. You find these texts on the Ilias platform.

For many of the topics the syllabus provides recommendations for optional reading.
